Code	Photography	Description
351		Emergency call. You can save decisive time in emergency situations. If an accident is detected, this equipment automatically makes an emergency call through a communication module with its own SIM card. That way you can speed up the arrival of emergency teams. This call can also be activated manually to request help.
08U		Pre-installation for Vehicle Settings. Memorize your personal driver profile and your Mercedes-Benz will adapt to your preferences. Some of the components are: <ul style="list-style-type: none"> - - Remote vehicle status information - - Remote opening and closing of doors - - Speed alert - - Personalization
09U		Pre-installation for Vehicle Monitoring. The Vehicle Monitoring service connects you with your car and ensures that you are always well informed. This way you will know at all times where your vehicle is, and you can define the area in which it can circulate.
365		Hard disk navigation. Fast hard drive navigation with touch or voice control allows you to save time. The smart system reliably guides you to your destination, using both local information and current online information. Pre-installation for navigation services
01U		Wherever you go, you will be perfectly informed. Your vehicle answers your questions about the trip. You will know the meteorological information among other functions.
362		Communication module (LTE) for the use of Mercedes me connect services The communication module with LTE functionality SIM card permanently installed in the vehicle offers you increased comfort and safety. This module connects you permanently with your vehicle, and connects the vehicle with the infrastructure, including the Mercedes-Benz server and the Internet.
26U		Remote engine start Thanks to the connectivity through the cell phone, it allows you to remotely start your vehicle.
